Chapter -1

State Profile

Physical Location:

Himachal Pradesh is predominantly a mountainous State located in North – West India. It shares an international border with China. The State has highly dissected mountain ranges interspersed with deep gorges and valleys. It is also characterized with diverse climate that varies from semi tropical in lower hills, to semi arctic in the cold desert areas of Spiti and Kinnaur. Altitude ranges from 350 meters to 6975 meters above mean sea level. It is located **between Latitude 30⁰ 22'.40" N to 33⁰ 12'.20" N and Longitude 75⁰ 45'.55" E to 79⁰ 04'.20" E.**

Figure 1.1 Digital Elevation Model, H.P.

Demography:

Population of Himachal Pradesh is 68.56 lakh persons as per the Census report for the year 2011. 89.01% of the total population inhabits 20,604 villages in the rural areas of the State. These villages are sparsely distributed across the State having population density as low as 1-2 persons per square kilometer in the remote and tribal area of Lahaul & Spiti. Hamirpur district has largest population density of 369 persons per square kilometer as against 123 persons per square kilometer for the whole State. Himachal Pradesh is one of the few states of the country where gender equality is an integral part of the social ethos as well as the overall development strategy. Female literacy is well above the national level and women employment is much higher than in most states of the country.

Administrative Units:

In order to make the functioning smooth, the State is divided into twelve districts which are grouped in three Revenue Divisions i.e. Shimla, Mandi and Kangra. There are 81 Sub Divisions, 113 Tehsil, 73 Sub-Tehsil, 88 Development Blocks and 3615 Panchayats. The State has very effective structure of PRI's comprising 12 Zila Parishads and 81 Panchayat Samitis. There are also 27 Municipal Councils and 29 Nagar Panchayats, besides 7 Cantonment Boards and 5 Municipal Corporations in the State.

Topography:

Topographically, the state can be divided into three zones:

- 1. The Shiwaliks or Outer Himalayas:** It covers the lower hills of Kangra, Hamirpur, Una and Bilaspur, lower parts of Mandi, Solan and Sirmour districts. Within this zone, altitude varies from 350 m to 1500 m.
- 2. Inner Himalayas or mid-mountains:**Altitude varies from 1500 m to 4500 m above mean sea level and includes areas such as the upper parts of Pachhad and Renuka in Sirmaur district, Chachiot and Karsog tehsils of Mandi district and upper parts of Churah tehsil of Chamba district.
- 3. Alpine zone or the greater Himalayas:**Has altitude above 4500 m above mean sea level and comprises areas of Kinnaur district, Pangi tehsil of Chamba district and area of Lahaul&Spiti district.

Geology & Geomorphology:

Himachal Pradesh with its complex geological structures presents a complicated topography with intricate mosaic of mountainous ranges, hills and valleys. Composed of recent Alluvium, Shiwalik hills are made up of rocks such as sandstone, shale and clay that came into existence during the Eocene, Miocene and Pliocene period.

The central part that extends from Chamba district in the north to Shimla district in the south is mainly represented by Jatog group of rocks which originated in middle Proterozoic period. In the north eastern portion unclassified Granites borders the central part in between Kullu, eastern Shimla, Lahaul-Spiti and parts

Figure 1.2 Geography of Himachal Pradesh

of Kinnaur district. The eastern greater Himalaya presents the Triassic formation which is found in Kaza tehsil of Lahaul-Spiti district. The oldest rocks are Granites found at Jeori-Wangtuand Bandel near Largi in Kullu district. These granites date back to a stage of the crust at a time when India was located 8000 Km southwest of its present position.

Figure 1.3 Geological and Mineral Map of Himachal Pradesh

Climate:

The climate varies across the state with the altitude. In the southern low tracks between an altitude of 400-900 m it is hot sub humid type, between 900-1800m altitude warm & temperate, between 900-2400 m cool & temperate, cold alpine & glacial above 2400-4800 m altitude. Bilaspur, Kangra, Mandi, Sirmour, and Una districts experience sub tropical monsoon, mild and dry winter and hot summer. Shimla district has tropical upland type climate with mild and dry winter and short warm summer. Chamba district experiences, humid subtropical type climate having mild winter, long hot summer and moist all season. Kullu district experience mainly humid subtropical type of climate with mild winter moist all season, long hot summer and marine. During the period from January to February heavy snowfall in higher reaches create conditions for low temperature throughout the state making it unpleasant

Figure 1.4 Climatic Classifications of Himachal Pradesh

and series of western disturbances also affect the state.

Table 1.3 Climate Pattern of Himachal Pradesh

Climate Pattern	Districts
Sub-tropical Monsoon (Cwa type) Mild and dry winter, hot summer	Bilaspur, Kangra, Mandi, Sirmour, Una, Hamirpur, Solan, Chamba
Sub-tropical Monsoon (Cwb type) Mild and dry winter, moderate hot summer	Shimla, Parts of Chamba
Sub-tropical monsoon (Cfa type) Without dry winter with hot summer	Chamba, Major parts of Kullu, Mandi
Sub-tropical monsoon (Cfb type) Without dry winter with moderate hot summer	Minor parts of Kullu
Humid continental (Dwb type) Severe and dry winter, warm summer	Kinnaur
Humid continental (Dfb type) Severe winter moist all seasons, short warm summer	Lahaul & Spiti

Land use:

As per Land use statistics, Ministry of Agriculture (GoI), 2005, about 12.21 percent of the total reporting area of 4547000 ha of the state (out of 5567000 ha. of geographical area) is under cultivation. 24.06 percent is under forest. Permanent pastures and other grasslands account for about 33.63 percent, 1.25 percent land is under miscellaneous tree crops and groves, 2.73 percent is under the cultivable wasteland, fallow land other than current fallow 0.29 percent, current fallow 1.19 percent and net sown area is 12.21 percent.

Figure 1.5 land use in Himachal Pradesh

Forest Cover:

Forests are an important resource of Himachal Pradesh. Out of the 55,673 sq km of its geographical area, 37,948 sq km (68.16%) is legally classified forest area.

As per Forest Survey of India Report 2021, Himachal Pradesh has 15,443 sq km (27.73%) of its area under forest cover.

Rivers and Catchments:

Five perennial rivers Satluj, Beas, Ravi, Chenab and Yamuna flow through the state. The utility of these rivers though restricted considerably by the rugged and undulating terrain of the State, nevertheless, these rivers possess immense potential for the generation of hydro-electricity. The following river catchment areas fall in the State.

Table 1.4 River Catchment Areas in Himachal Pradesh

Name of River System	Area of Catchment	Area in percentage
Sutlej	20,398	30.69%
Beas	13,663	24.50%
Chenab	7,850	14.20%
Yamuna	5,872	10.60%
Ravi	5,528	09.90%
Indus	1,450	02.60%
Markanda	360	00.60%
Ganga	290	00.50%
Ghaggar	262	00.50%
TOTAL	55,673	100%

Lakes/Reservoirs:

The state has both manmade and natural water bodies located in different parts of the state for specific purposes viz. irrigation, hydro-electricity, and flood control. Some of the important reservoirs of the state are Govindsagar, which spreads into the Bilaspur and Una districts, Pong Dam in Kangra, and Pandoh in Mandi District. Chandertal, Renuka and Manimahesh are some the important natural lakes of the state.

Health:

The State has an extensive network of health care institutions. There are 98 hospitals, 2104 Sub- centres, 92 CHC's/RH, 588 PHC's, with available bed capacity of 14527. Similarly, there are 33 Ayurvedic hospitals, 1182 dispensaries/health centres with a bed capacity of 941 available in the state. Besides, there are 3 Ayurvedic Pharmacies and 1 Research Institute. Birth and death rate in the state is 15.3 per 1000 and 6.8 per 1000 respectively.

Roads and Bridges:

Total 18156 villages are connected with roads in the state. The total road length in the state is 40055 Km out of which the single lane road length is 32940 km, double lane road length is 1396 km and jeepable road length is 369 km.

Chapter -2

Rainfall Status and Current Disaster Situation

Pre-monsoon Period

The pre-monsoon period varies each year, and its impact on rainfall can differ based on several factors, including climate patterns and regional variations.

Weather summary

Precipitation activity in Himachal Pradesh in the month of March was weak on many days with four days of widespread vigorous activity. In the month of April, precipitation activity in state was weak on many days with three days of fairly widespread to widespread precipitation activity. In May month, state received four spells of moderate precipitation at few places.

Monthly Precipitation and Departure

Himachal Pradesh received excess precipitation (24%) in March month i.e. from 01.03.2024 to 31.03.2024 and normal precipitation (-1%) in the April month i.e. from 01.04.2024 to 30.04.2024. The State received large deficient precipitation (-73%) in May month i.e. from 01.05.2024 to 31.05.2024. Districts Bilaspur, Chamba, Hamirpur, Kangra, Kinnaur, Lahaul-Spiti, Shimla, Sirmaur, Solan and Una received large deficient precipitation whereas districts Kullu and Mandi received deficient precipitation.

Pre-Monsoon Season Precipitation and Departure

The state received normal (-8%) precipitation in Himachal Pradesh in pre-monsoon season i.e. from 01.03.2024 to 31.05.2024. 9 districts of the state received normal precipitation. District Kullu received excess precipitation whereas Kinnaur and Solan received deficient precipitation during pre-monsoon season.

Precipitation

1) Pre-monsoon season rainfall Departure (in %) comparison from 2010-2024

According to the above chart, year 2022 had minimum precipitation (-74%) departure during pre-monsoon season followed by the year 2004 (-63%) departure. Year 2015 had received maximum precipitation with 30% departure followed by 2023 with 19% departure.

2) Comparison of actual precipitation and departure (%) in HP for period 2010-2024 for May.

Year	Actual	%Dep.
2010	78.9	28.0
2011	47.4	-23.0
2012	12.8	-79.0
2013	30.2	-51.0
2014	64.6	-3.0
2015	44.7	-33.0
2016	70.2	5.0
2017	62.0	-7.0
2018	47.3	-29.0
2019	41.0	-39.0
2020	58.5	-12.0
2021	60.1	-10.0
2022	51.2	-23.0
2023	116.8	84.0
2024	17.0	-73.0

3) Comparison of actual precipitation and departure (%) in HP for period 2010-2024 for pre-monsoon season-

Year	Actual	%Dep.
2010	157	-31
2011	167.9	-26
2012	134	-41
2013	130.1	-42
2014	238.9	-2
2015	318	30
2016	232.1	-5
2017	207.4	-15
2018	143.3	-41
2019	133.8	-45
2020	271.5	12
2021	213.6	-12
2022	64	-74
2023	287	19
2024	221	-8

4) Monthly and Seasonal Actual Rainfall(in mm) comparison from 2010-2024:-

Monsoon Period:

Extreme Weather Events of Flash Floods, Landslide and Cloudbursts

Monsoon season in India spans over four months from June to September. However, its arrival and withdrawal occur on different dates in different parts of the country. Normal date of arrival of monsoons in Himachal Pradesh is during the last week of June. This year, monsoon was on time and arrived in Himachal Pradesh on 25 June 2024.

Rainfall data month of July 2024

Precipitation activity in Himachal Pradesh in the month of July was weak to normal on many days with four days of widespread precipitation activity of active intensity. State has received deficient precipitation which is 107th highest rainfall in the month of July for the period (1901-2024) whereas highest rainfall was received in the year 1949 (548.6mm).

Year	Precipitation	Departure
1949	548.6	114.4
2024	180.5	-29

Monthly precipitation and departure-

The State received deficient precipitation (-29%) with 180.5 mm actual rainfall against 255.9 mm normal rainfall in the July month i.e. from 01.07.2024 to 31.07.2024. District Kangra has received highest rainfall amount viz. 581.5 mm. Districts Kangra, Kullu, Mandi and Shimla received normal rainfall whereas Districts Bilaspur, Chamba, Hamirpur, Kinnaur, Sirmaur, Solan and Una received deficient rainfall and District Lahaul-Spiti received large deficient rainfall.

Rainfall data for month of August 2024:

Precipitation activity in Himachal Pradesh in the month of August was weak to normal on many days with four spells of fairly widespread to widespread precipitation activity of active intensity. State has received normal precipitation (243.6 mm) which is 73rd highest rainfall in the month of August for the period (1901-2024) whereas highest rainfall was received in the year 1927 (542.4 mm).

Year	Precipitation	Departure
1927	542.4	111.2
2024	243.6	-5

Monthly precipitation and departure:

The State received normal precipitation (-5%) with 243.6 mm actual rainfall against 256.8 mm normal rainfall in the August month i.e. from 01.08.2024 to 31.08.2024. District Kangra has received highest rainfall amount viz. 654.8 mm while district Shimla has received highest rainfall departure (53%) against normal rainfall. Districts Shimla, Sirmaur and Bilaspur received excess rainfall whereas Districts Mandi, Kangra, Solan, Chamba and Una received normal rainfall; Districts Hamirpur, Kullu and Kinnaur received deficient rainfall and District Lahaul-Spiti received large deficient rainfall.

District wise monthly rainfall (in mm) and Departure (in %)

Major Landslides which took place during this period

A large number of landslides were recorded because of heavy rainfall, cloudburst and flash floods during this season. District wise detail is as under:-

Landslide Incidents		
Sr. No	Name of District	Total
1.	Chamba	06
2.	Kinnaur	06
3.	Kullu	02
4.	Lahul&Spiti	06
5.	Mandi	10
6.	Shimla	10
7.	Solan	05
Total		46

Source: State Emergency Operation Centre, Himachal Pradesh

In addition to this large number of medium and small landslides also took place in various parts of the State which resulted in huge loss to public and private properties.

Cloudburst recorded during this period:

During this monsoon season a number of cloudbursts were recorded. A total 12 numbers of Cloudburst were recorded which are as under:-

Cloudburst Incidents		
Sr. No	Name of District	Total
1.	Kinnaur	01
2.	Kullu	05
3.	Lahul&Spiti	04
4.	Mandi	01
5.	Shimla	01
Total		12

Chapter –3

Preparatory Measures

Preparatory measures taken to prevent/reduce losses from disasters during Monsoon Period:

Monsoon season brings a lot of challenges to the state and causes wide spread damages and losses. In order to reduce loss of human life and property, the State was well prepared to deal with the situation and had taken a lot of measures. Some of the steps taken have been elaborated in the succeeding paras.

State Wide Mega Mock Drill:

The HP State Disaster Management Authority successful organized mega mock drill on Flood Landslide and GLOFs conducted on 14.06.2024. The collaborative efforts and coordination displayed during the drill reflect a significant step towards unified disaster preparedness and response. By involving the National Disaster Management Authority (NDMA), various stakeholder departments, and response agencies, the exercise demonstrated the importance of working together during crises.

The simulation of 103 different sites across the state in the mock drill provided a comprehensive and realistic approach to testing disaster response capabilities. This thorough assessment helped identify areas of improvement and strengths in the disaster management plan, contributing to more effective preparedness in the future.

Some of the key aspects that were assessed and highlighted during the mock drill include:

1. **Effective Coordination and Collaboration:** The success of the mock drill was attributed to the seamless coordination and collaboration among all participating agencies and stakeholders. This shows that working together is essential in disaster management scenarios.
2. **Importance of Preparedness:** The mock drill underscored the significance of regular preparedness initiatives. Being well-prepared and conducting such drills can enhance the response capacity during actual disasters.

3. **Communication Systems:** The drill emphasized the need for robust communication systems that can function effectively during a crisis. Efficient communication is crucial for coordinating responses and disseminating information.
4. **Public Awareness and Participation:** The drill stressed the importance of educating the public about disaster preparedness, evacuation procedures, and safety measures. Public participation and awareness can significantly improve overall response and safety.
5. **Resource Allocation and Management:** The exercise exposed the importance of proper resource allocation and management. Adequate deployment of personnel, equipment, and relief materials can have a significant impact on response effectiveness and minimize casualties and damages.
6. **Multi-Agency Response:** The mock drill highlighted the necessity of integrating efforts from various departments, including police, fire services, medical teams, and NGOs, to optimize disaster management strategies. A coordinated multi-agency response is vital for handling large-scale disasters effectively.
7. **Evacuation Procedures:** The mock drill involved government offices and schools conducting evacuation drills in their respective premises. This helped identify areas for improvement, such as identifying safe evacuation routes and addressing potential bottlenecks to ensure swift and safe evacuations.

Overall, the successful mock drill has proven to be an essential learning experience and a valuable tool for enhancing the state's disaster preparedness and response capabilities. Implementing the lessons learned from the drill will undoubtedly strengthen the disaster management plan and improve overall resilience in the face of future emergencies

Monsoon Preparedness Review Meeting:

In order to review monsoon preparedness, a meeting was held with State and Central agencies and all the Deputy Commissioners on 13 June, 2024. Necessary directions were issued to all stakeholders to ensure adequate measures for relief, response, search and rescue and restoration of essential services during the monsoon.

- As a preparatory measure the NDRF was prepositioned at Mandi, Nurpur (Kangra), Kullu and Rampur.
- Three Life buoys were stationed at Bilaspur (Govindsagar lake), Kangra (Pong dam) Mandi (Tattapani) for Search and Rescue. One Drone was provided to DEOC Mandi for aerial survey.

Review Meeting with Large Dam Authorities:

A special meeting was held on 1st May, 2023 by the State Disaster Management Authority with the department of energy and authorities of 24 hydro power projects to review the status of preparedness of impending Monsoon 2023 and implementation of guidelines of the Central Water Commission.

Communication Mock Drill:

A communication mock drill was conducted under the chairmanship of Sh. D.C. Rana, Director-cum-Ex Officio Special Secretary (Revenue-DM), at the State Emergency Operation Centre (SEOC), HP Secretariat, Shimla, on 18th June 2024 at 11:30 AM. The SDMA organized a video conference with all DDMA's and relevant departments, during

which officials from M/s Station Satcom provided a presentation on I-SAT functions and addressed queries from participants. During the drill, Flyway VSAT with video conferencing capabilities installed by the CTS Police Department was tested. The functionality of V-SAT and I-SAT systems was also reviewed, followed by test calls conducted by all departmental and SEOC representatives. The details of the calls made during the exercise are enclosed as annexures for further reference.

Following the tests, M/s Station Satcom was instructed to provide a list of Dos and Don'ts for using I-SAT phones and to address technical faults, such as the non-functional I-SAT displays in Lahaul & Spiti. SDO(C) Barmour was directed to resolve antenna issues and advised that I-SAT phones at police stations be stationed at the Munshi's desk for continuous functionality.

Further, the Police Department was asked to submit a proposal for procuring I-SAT antennas and prepare a report on the interference of 5G with V-SAT signals. A stock check of the ISAT phones provided to HP-SDRF revealed non-functional devices, prompting the chair to direct SP-SDRF to activate them before the 2024 monsoon season. All SDMs were advised to keep I-SAT docking stations with their PA/Steno during office hours and maintain I-SATs as per the SOP issued in June 2019.

Review of Mock Drill conducted by HPSDMA

Review Meeting Post Disaster:

Hon'ble Chief Minister Thakur Sukhvinder Singh Sukhu convened an emergency meeting of senior officers of the state government to review the situation arisen due to five cloud bursts and heavy rains in different parts of the state. Three cloud bursts struck the Kullu district and one each in Mandi and Shimla districts.

The most affected site was Samej area of Jhakri in Shimla district where residential area had also been affected due to cloud burst and around 36 persons were missing whereas one road had also been blocked. In Mandi district, the cloud burst occurred near Tikkan Thalukot village of Padhar tehsil where about seven persons were reported missing and two bodies had been retrieved while three houses were also damaged.

In Kullu district, the cloud burst hit village Jaon in Nirmand Tehsil where seven persons were missing and nine houses were washed away besides causing damage to two bridges. The incidents of cloud bursts also took place in the upper reaches resulting in a rise in water level in Pin Parvati river and one bus was washed away. Another incident took place at Malana Sub Tehsil Jari of district Kullu causing damage to Malana bridge and nine persons were stranded along the Beas river near Malana.

In view of this, five transport drones are proposed to enable the police to carry out transportation activities in the affected areas. The Satellite phones are also being provided at SDM level so that the communication system could be strengthened. 50 generators are proposed to be given to Police Stations and Police Posts to ensure 24×7 power back up.

- The Chairman of the State Disaster Management Authority (SDMA) has established a cabinet subcommittee focused on strengthening disaster management in the state.

Search and Rescue:

- QRTs were constituted for search and rescue operation in the districts.

- The State machinery was fully activated, and relief and restoration work was carried out round the clock. The situation of the three districts was monitored constantly.
- Search and Rescue (SAR) operations were executed promptly.

Funds:

- State has released funds under SDRF/NDRF to Deputy Commissioners to the tune of Rs. 210.31Crore under different heads for relief and restoration measures during the current Financial Year.
- State has released funds under SDRF/NDRF to Departments to the tune of Rs. 132.46 Crore under different heads for relief and restoration measures during the current Financial Year.

IEC and Early Warning

- Early warnings with CAP were disseminated regularly as and when received from IMD and CWC.
- State has set up 30 Nos. of Landslide sensors for Sirmour, Mandi, Kangra and Kinnuar District for Landslide Monitoring.
- Do's and Don'ts were broadcasted through AIR, TV, Print and Other electronic media on regular intervals.

Losses and Damages Monitoring

- The DEOCs were monitoring and reporting incidents/losses and damages regularly and the State EOC generated cumulative loss reports on daily basis.
- With the assistance of the Department of Energy, HPSDMA has established a comprehensive dam safety control system to monitor the water levels of 23 dams. This initiative aims to enhance safety measures, ensure efficient water management, and mitigate potential risks associated with dam operations. Regular monitoring will help in making informed decisions and maintaining the integrity of these critical infrastructures.

Steps taken by the government for the Monsoon of 2024

- 73 more I-sats (satellite phones) are being added for emergency communication network. In this regard, an MoU was signed on 29 June 2024 with Bharat Sanchar Nigam Limited for operation of I-SAT phones for five years at a total cost of Rs 6.41 crore.

- Each of the 23 dam authorities has been directed to deploy 2 I-sat (satellite) phones per project, one at the dam site and one at the power house. Till date, 21 I-SAT phones have already been installed by the concerned dam authorities.
- 9 I-SATs (satellite phones) have been provided to State Disaster Response Force (SDRF). For this, an amount of Rs 35 lakh was made available to SDRF.
- 11 I-SATs (satellite phones) of the National Disaster Response Force have also been mapped for emergency communication and coordination.
- ITBP's 14th I-SAT has been mapped which is being used to disseminate information during emergency situations.
- An amount of Rs. 65 lakh has been sanctioned to the Technical Services Branch of the Police Department for purchase of Docking Station (I-SAT antenna for indoor use of I-SAT phones) to improve emergency communication.
- A sum of Rs 15 lakh has been sanctioned to the Police Department for purchase of 30 C-Band Pass Filters to improve the smooth functioning of V-SAT running in 5G network to improve emergency communication.
- After facing a shortage of boats in the lower part of Pong Dam during Kangra floods, the National Disaster Response Force has purchased 12 more boats, taking the total number of boats available to 33.
- The State Emergency Operation Center located in the Himachal Pradesh Secretariat has been shifted to an Integrated Command Control Center with better facilities for disaster management with the help of Call Management System(CMS).
- A team of 14 personnel from the Department of Environment (DoE) has been deployed at the State Emergency Operation Center to monitor the water level of the dam and implementation of the rule curve (adjusts excess discharge). This team is monitoring the management of dam operations round the clock.
- C-DAC, Pune has been selected as the lead technical agency to assess the sensitive glacial lakes in the state. In this regard, four glacial lakes have been flagged as potential risks, with site visits planned for August and September. So far, the Geepang Gath expedition and Baspadchkashang expedition has been completed. The Mantalai expedition has been rescheduled in september in view of the ongoing monsoon.
- Along with setting up three data centers at State Emergency Control Centre, District Emergency Control Center Hamirpur and Meteorological Centre, 48 Automatic

Meteorological Stations/Rain Gauge/Snowometer units are proposed in those blocks where meteorological observatories are not available. MOU has been signed with IMD for installation of these Stations. Keeping in mind the previous experience of Jal Shakti Department, the department has appointed Jal Shakti as the nodal agency for the implementation of the project.

- To improve emergency response, and reduce response time, the department has mapped 356 agencies dealing with emergencies that can be designated response centers located at various locations in the state. Each response center will be expected to play its own role and responsibility in dealing with such situations. In this regard, the department is in the process of setting up an equipment bank at all 356 locations. The bank will have basic rescue/life saving equipment to handle emergency situations.
- To address the vulnerabilities related to landslides and land subsidence during the last monsoon season, the Department has identified various experts and research institutes such as Central Building Research Institute - Roorkee, Wadia Institute of Himalayan Geology, Central University of Himachal Pradesh, Indian Institute of Technology - Mandi, Himachal Pradesh University - Shimla and National Institute of Technology, Hamirpur for preliminary studies. The preliminary study covers 109 sites with financial sanction of Rs. 36,56,800/-.
- In collaboration with the Geological Survey of India, landslide early warning is being conducted for Shimla and Kinnaur districts of the state. The system developed by the Geological Survey of India is designed to predict the probability of landslides based on rainfall data. An MoU has been signed on December 27, 2023 for the implementation of the project. The pilot project has been started in Shimla and Kinnaur districts from 15 June 2024.
- The National Center for Seismology, Ministry of Earth Sciences and State Disaster Management Authorities propose to establish an earthquake early warning system on a pilot basis. In this regard, the National Center for Seismology has undertaken field visits to Chamba, Kangra and Una districts for installation of 50 instruments (Strong Motion Array) within a year. In addition, National Center for Seismology will carry out such field studies for installation of instruments in the rest of the district.

Chapter – 4

Brief Summary of Damages and Losses

Major Disaster Events that occurred in State of Himachal Pradesh

1.1 District Mandi

Date – 01.08.2024 Time – Approximately 11:00 PM Location – Rajvan Sub-Tehsil-Tikkan Sub-Division Padhar

**Aerial View of
Village Rajban**

The incident was reported by Tehsildar Padhar to the administration around midnight that a cloudburst had occurred in Rajvan Sub-Tehsil-Tikkan Sub-division Padhar at 11:47 PM and the information was transmitted immediately to the Fire Department, Police Control Room, SDRF. The SDRF, NDRF, Police, and Tehsildar Padhar rushed to the spot immediately. The Deputy Commissioner Mandi moved to the incident site to oversee the search and rescue operations. A medical team was also moved to the incident site for treatment and first aid. With the help of Police Personnel drone surveillance was conducted to assist in the operation.

Loss of Life and Property:

- 4 houses and one cowshed were damaged
- 10 persons were missing, out of which bodies of 9 have been recovered.
- 1 person is still missing.
- 2 animals have been perished.
- Connectivity to the area has been severely damaged.
- Total loss reported is Rs. 8.47 crore

District Kullu

1. Subdivision Nirmand

- a. Incident 1: Cloudburst at Shinghad, 1st August 2024, approx. 01:05 am Connectivity at Baghipul has been cut off. Total 8 persons were missing. 2 bodies have been recovered. 8-9 houses have been washed away.
- b. Incident 2: Cloudburst at Samej, 1st August 2024, approx. 03:30 am, 3 persons are missing. 3-4 houses have been washed away.

Bridges have been lost. Connectivity to the areas has been affected. Essential services such as electricity and water supply network has been washed away.

Field Observations at Incident 1:

After the current disaster of 2024, a field visit was planned to the affected areas of Kullu and Shimla district mainly at Samej and Bagipul on 6th & 7th August 2024. Based on the field visit, the following observations were made in respect of Bagipul: -

- Bagipul is mainly located on the downstream of Rampur and is along the KurpanKhad that joins the Satluj River on its right bank near village Dropa. Bagipul is located at 1548 Mts. Above M.S.L and bounded by 31° 31' 13.69'' N latitude and 77° 33' 33.50' East longitude.
- Bagipul was also affected due to heavy floods on the intervening night of 31st July and 1st August 2024 midnight due to very heavy precipitation resulting flash floods in the areas that initiated from the upper catchment of the KurpanKhad.
- The built up area at the Bagipul where the devastation occurred is mainly situated on the flood plains formed along the KurpanKhad where the khad flows through a wide course.
- The discharge contributions were mainly from the left bank nala carrying very heavy load roughly of about 10-15 mt high damaged the infrastructure mainly the houses and bridge at Bagipul.
- The predominant damage was mainly on the right bank of the KurpanKhad at Bagipul where the infrastructure was mainly on the old flood plains of the KurpanKhad.

Summary of Damage and Losses

- Total 13 persons were missing, out of which 4 bodies have been recovered and 2 identified.
- More than 50 persons have been successfully evacuated.
- 60 houses and 18 cattle sheds have been damaged.
- 123 cattle have perished.
- 4 motorable bridges and 7 pedestrian bridges have been washed away severely affecting connectivity.
- 3 schools, 17 shops, and 12 vehicles have been washed away.

Field Visit Photographs of Bagipul

Field Visit Photographs of Bagipul

Field Visit Photographs of Kedas

Tehsil Manali:-

A cloudburst incident had occurred in Paagal Naal near Anjani Mahadev, Tehsil Manali, District Kullu (Coordinates 32.31E, 77.17N).

MS03 Glacier Gallery Near BRO Café, Atal Tunnel

Around 12 mid night, cloud burst occurred in Anjani Mahadev area due to which water level in Sarehi Naala rose to a dangerous level. Huge boulders and debris from the Atal tunnel dumping site were flowing with the waters due to which the flow of the Naala

was changed and the course diverted towards the Palchan-Solang Naala road. Water entered the Kapil Mohan Beas Kund Hydro project and the house of Sh. Dhani Ram r/o Vill Palchan was completely washed away. One shop of Sh. Khoob Ram was partially damaged.

Palchan bridge

POCO X4 PRO 5G
SHYAM THAKUR

25/07/2024 05:37

Damage incurred at Kapil Mohan Beas Kund Hydro power project

Damage to local residents

The water level in Naalas has receded to normal and no loss of life has been reported yet. Worthy DC Kullu visited the incident sites on 25.07.2024 along with all stakeholder departments.

Malana Village in Kullu District:

A cloudburst incident occurred above the higher peak of Malana Village. This resulted in a flash flood in Malana Khad, which feeds into the Parvati River. Due to the paraglacial zone's deep gorges, the Malana dam burst was similarly caused. While the upstream Phase 2 of Malana managed to open its gates in time, the failure to do so by the downstream Phase 1 project, located nearly 10 kilometres away, led to severe erosion of the soft sediment valley on its right end and a subsequent burst of water from the dam, though the main dam structure remained intact. Due to this nearly 200 people including tourists were stuck in village malana. Evacuation of these people was done by district administration and food ration was provided as the roads to the village were completely damaged.

Damage to Malana Stage-I and Stage-II Hydro Electric Project:

Malana-I:

Project Road at RD 6800 got completely washed out for a length of about 80 to 100 Mtrs
Project Road at RD 8500 got completely washed out for a length of about 100 to 120 Mtrs
The steel bridge and its abutments provided by MPCL (Malana - 1) near 8500 RD (down stream of reservoir) was also completely washed out. About 12 blocks of the Gravity Wall of reservoir near overflow structures have got settled and reservoir floor alongside has also completely damaged. Due to flash-flood and overflow, Barrage Control Room was damaged. Besides this, Intake Gates and HR Gates have also completely choked. Whole area including reservoir Desilting Chambers and Low Water Channel is filled with silt and muck. Channel for a length of app. 300 meters has been washed away. The water had overflowed from the reservoir level resulting in scouring of the river DG Room with two numbers of DG sets got washed away There are damages to the Barrage Control Room, Operator Room Control Room approach is filled with stones and mud. Security Post has also washed out. 11 KV power supply at Barrage was completely disrupted with uprooting of

Malana-II:

Approach road between powerhouse and dam got damaged in the flood. Approach Bridge to Main access tunnel of powerhouse was washed away in the flood, led to no approach to powerhouse. 132 KV switchyard, its control room, 725 KV DG were washed away in the flood. Connecting bridge to Tail race tunnel cum cable tunnel was washed away in the flood. Main Admin building was washed away in the flood. Three tower Viz tower no: 01, 02 and 03 of 132 KV D/C transmission line were washed away in the flood. Flood Water back flows to the powerhouse via TRT, team inside the powerhouse confirmed that level went down after some time. 1 No. 30 Ton ropeway, 2 Nos 6 Ton Ropeways and 500 kG ropeway got damaged. Dam approach was damaged at several places from the starting point of the project site to RD 4500.

District Shimla

**DATE-1.08.2024 TIME- Approximately 3.30 AM, Samej Khad, Sub-Division:
Rampur Bushahr**

A cloudburst incident was reported to the Additional District Magistrate-cum-CEO-DDMA Shimla on 1077 (DEOC Shimla) around 3.30 AM at Samej Khad, Subdivision Rampur Bushar, District Shimla, H.P. Immediately the information was disseminated to District Magistrate –cum-Chairman, DDMA Shimla and Sub-Divisional Magistrate (Rampur Bushahr). Immediately DEOC started coordinating the field functionaries and got information from one of the worker of hydro Power Project ,Jhakri that around 12-15 persons are missing.

The District Magistrate, SP Shimla and SDM (Rampur Bushhar) rushed to the site to access the situation. As per the directions of District Magistrate, NDRF, Home Guard and Civil Defense 02nd BN & 03rd BN (46 personnels), SDRF (15 personnel's), Army, ITBP (25 personnel's), Police (36 personnel) CISF SJPNL along with volunteers were sent to the spot for rescue operations.

At 5:52 am the SDM reported that 10 people were shifted to nearby Shugga village. At 8:39 am it was reported that 36 people were missing and a total of 10 people were being evacuated. As of now, 15 dead bodies are recovered and 18 people are missing, and rescue operations are still going on.

FIG.1: Pre and Post disaster Satellite data Analysis

Field Observations at Samej village Rampur:

The second most affected site during current disaster visited was Samej village in Rampur Subdivision. The Samej village is located along the right bank of Satluj River which is approachable from Jhakri through a link road that connects the village which is about 15 Km from Jhakri. The village is located at an elevation of 1517Mts and at $31^{\circ} 32' 33.91''$ N latitude and $77^{\circ} 41' 53.47''$ East longitude. Based on the field visit, the following observations were made: -

- The Samej village is located along a nala that flows through a deep gorge and is characterised by very high drainage density in the upper catchment.
- The village Samej is mainly spread in two parts i.e the old one is along the right bank of the Samej nala and new one is at about 100 mts upstream direction above the confluence of two streams which appears to be seasonal in nature.
- Geomorphologically the region is characterised by the older fluvial terraces having with an appox. height of 30-35 mts that appears to have been formed by virtue of the deposition of the material along the flood plains of the two nalas supporting the development of agriculture and built up mainly about 10-12 houses which have been

constructed post 2000. Besides this, the flood plains and the river terraces could be seen in the downstream area along which a major part of the Samej village has been developed that too on the right bank.

- The damage occurred during the mid night was caused mainly due to very heavy discharge load from the left bank stream having very high-water column roughly around 30-35 mts. which is further evidenced by the traces of water that could be seen at very high level in the downstream area along the river course.
- The fluvial terrace was totally washed away by the water flow eroding all the 10-12 houses which were constructed on this terrace and thereafter the damage had occurred in the downstream portion mainly on the right bank and further downstream till it joins the Satluj river on its right bank near Jhakri.
- Large scale destruction could be seen all along its course and has affected the infrastructure like power projects and agriculture on its way.

Damage to Samej Hydro Electric Project (HEP):

- Trench Weir including U/S & D/S raft completely washed away. Main intake gate alongwith civil structure washed away. Gravel gate alongwith civil structure washed away. D-tank alongwith flushing valve & trashrack washed away. Foot bridge over Sechi river washed away. TRC outfall protection completely washed away. Power house approach road alongwith bridge completely washed away. Water conductor system of Malova weir damaged.

Inferences: -

Based on the field observations made at two incidents sites i.e Bagipul and Samej, the following inferences could be made: -

- At Bagipul, the major destruction was due to very heavy discharge of the Kurpankhad rising by about 10-15 mts and spreading spatially up to the old flood plains which have been occupied by the people and have constructed houses along the old river course.
- Likewise at Samej, the destruction in the upper part along the fluvial terrace which was hit directly by the high velocity gushing water with deep water column from the upper catchment passing through deep gorges eroding the whole fluvial terrace and thereafter the damage was mainly along the flood plains and river terraces in the downstream area where destruction was observed.
- From the field evidence and the landform features developed, it is inferred that in the Samej area, the nala has the history of carrying very heavy discharge load because of which the fluvial terraces of such a magnitude and the flood plains and the river terraces have been formed.
- The traces of water that could be seen along the river course downstream of Samej inferred that the height of the water column appears to be very high roughly around 30-40 mts resulting very heavy destructions in the area.
- The post disaster satellite data analysis also reveals that the water spread downstream of the Samej village has widened from 35 mts(pre disaster) to 118 mts (post disaster) reflecting that how the flood plains used to form after any event (Fig .1).
- In view of the nature of the damage and the destruction occurred, it is inferred that strict enforcement is required to avoid any type of development / constructions within the flood plains and the river terraces especially along those areas where the river/streams seem to have history of carrying heavy loads during the monsoon periods.

Summary of the Damage and Loss reported by the districts & SAR Measures

Damage /Loss Summary Damage/Loss	Name of the District			Total
	Kullu (Jaon/Bagipul)	Shimla (Samej)	Mandi (Tikkan)	
Total Missing	13	33	10	56
Body Recovered	4	15	9	28
Bodies identified	2	3	9	14
Evacuated	44	10	1	55
Stranded	0	0	0	0
House Fully Damaged	31	25	4	60
Houses Partially Damaged	30	6	0	36
Cattle shed	18	0	1	19
Cattle Loss	123	22	4	149
Motor able Bridges	4	1	0	5
Pedestrian Bridges	7	2	0	9
Shops	17	0	0	17
Schools	3	1	0	4
Health Infrastructure	0	1	0	1
Vehicles	12	4	0	16
Water Supply	5			
Fish Farm	3	0	0	3

Summary of Resources Deployed

Name of the Organization	Resources Deployed		
	Kullu (Jaon/Bagipul)	Shimla (Samej)	Mandi (Tikkan)

Loss to Hydro Projects

Sr. No.	Name of the Project	Power Generation Capacity	Damaged Components	Approx. Loss
1.	Upper Nanti Hydro Electric Project	13.5 MW	- Weir trashrack damaged. - LHS & RHS wing walls completely damaged. - Weir U/S and D/S raft damaged. - Conveyance channel damaged. - Staff accommodation completely damaged. 35KVA DG washed away. - Protection in front staff accommodation and gravel channel outfall washed away. 35 sq mm 500 mtrs LT cable washed away. - Traffic Bridge over P/H road washed away.	3 Cr Appx
2.	Sumez Hydro Electric Project	14 MW	- Trench Weir including U/S & D/S raft completely washed away. - Main intake gate along with civil structure washed away. - Gravel gate along with civil structure washed away. - D-tank along with flushing valve & trashrack washed away. - Foot Bridge over Sechi River washed away. - TRC outfall protection completely washed away. - Powerhouse approach road along with bridge completely washed away. - Water conductor system of Malova weir damaged.	6 Cr Appx
3.	Ascent Hydro Project Ltd.	(4.5 MW)	Powerhouse fully damaged	

Photographs of Ascent Hydro Project Ltd. (Samej)-4.5 MW

Cloudburst in Rampur-Taklech

On 16th August 2024, a cloudburst occurred in the Taklech area of the Rampur subdivision, Shimla district, damaging a 30-metre stretch of road. Heavy rainfall in the Damrali and Taklech villages led to the cloudburst in Damrali, causing the water levels of a nearby nallah to rise and create a flood-like situation.

Sub Divisional Magistrate (SDM) Rampur, immediately set out to assess the situation but was unable to reach the location due to the road damage. The district administration, however, contacted the local Panchayat Pradhan, who confirmed that no loss of life or property had occurred during the incident.

Additionally, the mobile tower in Damrali was affected, resulting in disrupted mobile signals for six nearby panchayats. The road connecting Taklech to Rampur was made through on 18th August, 2024 for vechiles.

Damage caused by cloud burst at Taklech Nala

Restoration of road from Taklech to Rampur

Damage at Ganvi Stage-I & II Hydroelectric Project

Incident overview:

Due to a cloud burst in the catchment area of Ganvi Khad during the intervening night of 31st July and 1st August 2024, a flash flood occurred in Ganvi Khad, resulting in an estimated discharge of about 670 cumecs, compared to the normal discharge of 15 cumecs. This sudden surge caused extensive damage to various components of the Ganvi Hydroelectric Projects Stage-I & II.

Consequently, a committee was constituted by the Office of the Chief Engineer (Generation), HPSEBL, Sundernagar, as per order no. HPSEBL/CEG/WP-108(6)/24-25-3704-07 dated 03.08.24 (Annex-A), to assess the extent of damage to various civil assets/components of the 2 x 11.5 MW Ganvi-I & 2 x 5 MW Ganvi-II HEP. In compliance with this order, the committee members visited the affected project sites on August 3rd, 2024, to evaluate the damage incurred during the flash flood.

The project-wise details of the damages are as follows:

Ganvi HEP Stage - I (22.5MW)

Intake site :-

Due to flash flood in Ganvi Khad, a discharge of about 670 cumecs has passed through the trench weir of Ganvi HEP stage-I alongwith huge quantity of silt, debris, big boulders , wooden logs etc. A foot bridge alongwith approach path to the intake structure towards upstream side of trench weir has been washed away . It is observed that trash racks in approximately 8 metres width of the trench weir have been washed away due to flood. The trench weir is filled with silt & debris and shingle flushing tunnel is choked due to entry of silt/debris. The outfall of the shingle flushing tunnel has also been damaged.

Power House Site: -

The approach road to the Power House of Ganvi HEP Stage-I has been damaged, with approximately 70 meters of the road near the bridge completely washed away. The abutments of the bridge over Ganvi Khad, along with the wing walls, have also been damaged. The protective works along the left bank of Ganvi Khad, from the upstream side of the bridge to the switchyard, have been washed away. Additionally, one 66 kV Double Circuit Transmission Tower has been damaged, which has further caused damage to the gantry structures of the 22 kV and 66 kV systems in the switchyard of Ganvi Stage-I HEP.

Ganvi HEP Stage-II (10 MW)

I) Intake site : - The trench weir of Ganvi Stage-II has been damaged. The upstream floor, downstream floor, trench weir & trash racks have been damaged. The protection works provided downstream of trench weir (RCC wall, cratewall etc.) has been washed away. The trench weir, conveyance channel and vortex type desilting chamber is filled with silt & debris. The chain link fencing provided along the reservoir area towards left side of Ganvi khad has been damaged. Approach road to intake site of Ganvi Stage-II near bridge on left bank of Ganvi Khad has been damaged. Stone pitching behind the trench weir gate has sustained damage as well.

II) Power House Site: - Approach road to power house of Ganvi HEP Stage-II near MAT has been damaged . The Panel fencing provided from left bank of Ganvi khad, from entrance gate to TRC outfall, has been damaged.

Photographs documenting the damages are attached (Annexure-I). The estimated cost of the damages is 345.35 lakhs detailed in Annexure-II)

Remedial measures and restoration works

a) Ganvi HEP stage I:-The following works of Ganvi HEP stage-I are required to be taken up on priority for restoration of the project. Total expenditure involved in immediate restoration of Ganvi HEP Stage 1 is 38.8 lakhs as per detail given below:-

S. No.	Name of Work	Estimated Amount
1.	Installation of aerial ropeway from approach road to the power house site.	Rs. 4.90 lakh
2.	Channelization of Ganvi Khad upstream of trench weir.	Rs. 4 lakh
3.	Restoration of approach road to Ganvi power house right bank of Ganvi Khad.	Rs. 20 lakh
4.	Restoration of damaged abutment of Bailey bridge.	Rs.9.9 lakh
	Total	Rs. 38.8 lakh

b) Ganvi HEP stage II:-The following works of Ganvi HEP stage-II are required to be taken up on priority for restoration of the project. Total expenditure involved in immediate restoration of Ganvi HEP Stage II is 70.97 lakhs as per detail given below:-

S. No.	Name of Work	Estimated Amount
1.	Repair of trench weir U/S and D/S of trash rack, C/O RCC beam upstream of trench weir including providing and fixing of washed away trash racks	Rs. 24.72 lakh
2.	Channelisation of Ganvi Khad to divert flow towards trench weir and filling of rut/ pot holes etc of intake road.	Rs. 4.93 lakh
3.	Removal of debris from vortex de silting tank and conveyance channel.	Rs. 1.42 lakh
4.	Removal and disposal of silt deposited in the reservoir of Ganvi Stage II.	Rs.39.9 lakh
	Total	Rs. 70.97 lakh

The above mentioned works of Ganvi HEP Stage-I&II are required to be carried out for immediate restoration of Ganvi HEP stage I&II and estimates for balance works/damages which are not critical for immediate restoration of projects will be framed subsequently.

46.		23.09.2024	DEOC Solan has reported a Landslide near Kararaghat to Shala Ghat in Sub-Division Arki, District Solan. As a result, the Kararaghat to Shala Ghat road has been blocked. Machinery has been deployed on both sides to remove the debris and restore the road.	Road Block :-01

Chapter – 5

Use of Remote Sensing for Damage Assessment

Damage Assessment based on Satellite Data Analysis

Space borne platforms that provides repetitive and synoptic coverage of the area and proves to be very useful in extracting any information on the land surface. The high resolutions satellite data has been successfully utilized for making post disaster assessment of flood affected areas along Samej and its surroundings. The Samaj is small village at an altitude of 1515mts above MSL and is located at $31^{\circ} 32' 32.84''$ N Latitude and $77^{\circ} 41' 54.05''$ E Longitude along the Samej khad that is a small tributary of Satluj River and joins it on its right bank at an elevation of 1060mts opposite to Jhakri near Rampur in district Shimla at $31^{\circ} 30' 07.69''$ N Latitude and $77^{\circ} 42' 26.05''$ E Longitude (Fig-1).

Fig-I

On the intervening night of 31st July and 1st August 2024, a flash flood occurred due to very heavy precipitation in the upper catchments of the Samej khad at an elevation of

about 5434mts above MSL from where it originates leading to very heavy flash floods in the Samej khad (Fig II-V) and its adjoining khads mainly the Kurpan Khad on its right and the Ghanvi khad on its left (Fig-----) . Since the event was occurred during the monsoon period, so data acquisition for the cloud free images is a very challenging in the mountainous regions. The preliminary damage assessment was carried out using best available IRS Resourcesat 2 LISS IV satellite image of 05th August 2024 having spatial resolution of 5.8 mts followed by Satellogic Satellite Image of 17 August 2024 having spatial resolution of 70cm.

Fig-II

Fig-III

Fig-IV

Fig:V: Samej Khad from upstream to downstream (Pre and Post Disaster)

Fig-VI

Fig-VII

Fig-VIII : Kurpan Khad from upstream to downstream (Pre and Post Disaster)

Based on the satellite data analysis carried out by National Remote Sensing Centre (NRSC-ISRO) for 05th August having partial coverage of the affected area and on 17th August 2024 having wide coverage of the affected area, the following observations are made:

- From the LISS IV satellite image of 05th August 2024, it is observed that major contribution of the inflow was from the left bank i.e along the Samej khad.
- The channel width observed to be enhanced from approx. 35mts (pre disaster) to approx. 118mts (Post disaster) (Fig-IX).
- From the analysis of high-resolution image of Satellogic Satellite having spatial resolution of 70Cm acquired on 17th August 2024, it is observed that the major destruction was to the built-up area that falls on the fluvial terrace near the confluence of two streams comely washing away about 15-16 houses along with heavy flow of water (Fig-X).
- Fig-XI reveals the extent of damage further downstream of the confluence reflecting the loss to the road sections and the houses along the riverbanks within the flood plains which were completely washed away.

- Fig-XII reflects that although the damage to the built up was not much significant in this part, but the extent of water could be seen with its wide coverage along the either bank of the Samej khad.
- Fig-XII further reveals the wide flood extent all along the river course further downstream before its confluence with the Saltuj River.

Relief Measures

On July 31, 2024, a series of cloudbursts in the Pir Panjal range resulted in devastating flash floods along the three valleys: Samej, Kurpan, and Ganvi Khad. These floods can be traced back to cloudbursts originating from the Shrikhand Mahadev mountain peak. A subsequent cloudburst over Malana led to further flooding in the Malana Khad area and the downstream villages.

Village Rajban Cloudburst incident:-

Step taken by District Administration-Mandi

- Relief Measures: ₹4 lakh relief given to the families of all 9 recovered bodies (total Rs. 36 Lakh) and 1 Injured - 15,000 rupees given (Total Rs 36.15 Lakh)
- The administration also distributed bedding (11 sets), blankets (11), gas cylinders (4), kitchen sets (4), and tarpaulins (10) to the affected families.
- Search and rescue operation is still going on and currently 92 personnel of NDRF, SDRF, Police, etc. working on the spot.
- Heavy machinery such as JCBs, Poclain, tippers and 20 labourers are assisting the relief operations.

-  Rescue Operation by NDRF - Village Rajban

District Kullu:-

Two incidents of Cloudburst occurred at Shinghad and Samej on 1st August 2024.

Relief Measures taken by District Administration:

- Total loss reported – 11.05 Crore
- Relief Measures: Immediate Relief 8 lakh provided. Relief is being provided to other affected persons.
- The administration also distributed Rashan Kits-(40), and tarpaulins (50), hygiene kits (20) to the affected families.
- Deployed SAR Team comprises personnels from SDRF, ITBP and Home Guards and currently 53 personnel are working on the ground.
- Deployed earth removers such as JCB, LNT, etc.
- Efforts to restore connectivity and essential services in the affected area is going on.

Restoration Efforts :

District Shimla

Relief Measures taken by District Administration:

- An amount of Rs 20,15,000/- has been distributed to 31 person those houses were affected.
- Rashan Kit (27), Blanket (54) and tarpaulins (32) were distributed among the 36 families.

- To accelerate the pace of Search & Rescue Operation, Deputy Commissioner Shimla also requisitioned 06 excavators from Chairman & managing Director, SJVNL on 03rd August 2024.
- On 04th August 2024 NDRF team was deployed at Sunni (downstream) and assigned responsibility for searching and retrieving dead bodies of victims and Home Guard and Civil Defence deployed at Sunni (downstream) will be responsible to bring the bodies of victims via boat or by hand from river till road head and handover the bodies to SHO Sunni.
- District Administration Shimla coordinated with District Administration Kullu, Mandi, Kangra, Bialspur, Panchkula and Ambala for divers.
- District Administration has requisite 02 binoculars from District Forest Officer, Wildlife Shimla and also requisite 06 excavators from Chairman and managing Director, SJVNL.
- District Administration has ordered District Treasury Officer to remain open till 12 AM for distribution of emergency relief.
- District Administration has set up communication control room at Samej for smooth information dissemination.

Visit of the Hon'ble Chief Minister to the Affected Areas

Hon'ble Chief Minister visited the affected sites to assess the situation, supervise relief and rescue operations. The State Govt. issued directions for relief measures as under:-

- Each affected family will receive Rs. 50,000 as immediate assistance.
- Rs. 5,000 per month, for three months, for hiring rented accommodation for those who have been rendered houseless.
- Provide free essential items of basic needs such as ration, cooking gas, blankets and stoves.

Other relief measures taken by the State Government:-

- Allocation of Financial Resources: Funds amounting to Rs. 286 crore have been allocated for emergency response, relief and restoration efforts.
- Pre-Positioning of NDRF Teams: Placed NDRF teams strategically in Kullu Kinnaur and Shimla Districts to manage emergency situations.
- Emergency Helpline: floated emergency helpline numbers separate from the State/District Emergency Operations Centres.
- Search and Rescue Operations: Deployed teams to evacuate over 250 tourists from Malana, 300 Pilgrims from Sri Khand Yatra.
- Specialized Rescue Team Formation: the State liaison with Army, Paramilitary forces, NDRF, CISF, SDRF, and local resources around 617 personnel (50 at Jaon/Bagipu in Kullu District; 481 in Samej affected Area of Shimla District and 86 in Tikkan affected area of Mandi District) along with earth removers and necessary SAR equipment.
- Missing Persons Search Team: Established a specialized team comprising 84 personnel from NDRF, SDRF, Home Guards and Forest Guards to locate missing persons along the Satluj River.
- Requested State Government of Uttarakhand for providing assistance for tracing the missing persons.
- The Directorate of Forensic Services has been involved to conduct DNA based verification of the dead bodies.

- Liaoning with Electronics & Radar Development Establishment (LRDE-DRDO), Ministry of Defence for deployment of their Team along with equipment for tracing the missing persons.
- Liaison with National Remote Sensing Centre Hyderabad for providing satellite images before and after the Cloudburst event.

District Sirmaur:

On 26th September, 2024 in the Paonta Sahib area of Sirmaur, torrential rains have caused cloudburst led flash floods, particularly in the Aanj Bhoj area of Giripar, where 11 panchayats have been cut off from communication. The bridge over Amboya Khad was partially damaged due to debris, and vehicular movement has been halted to prevent accidents. The obstruction of this vital link has left the local population stranded, affecting access to essential services.

- Immediate Response: Sub-Divisional Officer (Civil), Paonta Sahib, Sh. Gunjit Singh Cheema, along with local officials, visited the affected areas and provided immediate assistance and relief.
- Relief Camps and Assistance: Local NGOs and the administration set up relief camps, distributing food, clothing, and other essentials. Approximately 100 affected individuals received immediate support.
- Restoration Efforts: Efforts are underway to restore damaged roads and infrastructure on a war footing. All officers and employees from various departments, including the Jal Shakti Department, Electricity Department, and Public Works Department, are actively engaged in restoration work.
- The situation is currently under control. The local administration is diligently working to restore normalcy in the affected areas, ensuring that all necessary support and assistance reach the affected population. An assessment reports along with News cutting and photographs of the affected areas were compiled by DEOC-Sirmaur as Annexure-A, B & C respectively.

District Wise details of Relief Camps is as under

Sr.No.	District	Location of Relief Camp	Total number of beneficiaries	Description of Relief Camps	Duration of Relief Camp	Reason for running relief Camp
1	Shimla	Vill Samej, Near Khad	Families : 37	Relief camp was equipped with food facility for 500-700 people on daily basis	01st August 2024 to 17th August 2024	Due to cloudburst incident at Samej, Rampur
2	Lahaul & Spiti	Vill Karpap/ Sub Division Udaipur	95	Flash Flood occurred at Karpap Nalluh on dated 27.07.2024 and due to which villager of Karpap was feared to come under its impact. therefore, relief camps were established in form of temporary tent shelter. Total	-	1405

Loss on this account has been assessed to the tune of **Rs. 23.29 Cr. (Annexure-V and Annexure-II)**

4. Damage to roads

Heavy incessant rains during the monsoon w.e.f. 27th June, 2024 to 23th September, 2024, rains have lashed almost the whole of the State and huge damages have taken place in the entire state. Many Districts especially Solan, Shimla, Kinnaur, Sirmour, Kullu, Mandi, Kangra and Chamba were the worst effected which received huge magnitude of rainfall which resulted in excessive damages to roads, bridges and culverts etc. Due to excessive rains, most of the roads got huge land slides, major stretches of roads were washed away, most of the culverts got blocked and even washed away due to sudden and huge inflow of rainy water carrying slush and big boulders. Retaining structures along the road, in thousands got washed away or extensively damaged. Due to blockage of cross-drainage & blocking of roadside drains with landslides the rain water mostly traversed on roads causing extensive damage to road crust.

The Department has assessed an estimated cost for restoration of damages as Rs. 621.77 crore. The Zone wise including National Highway and Circle wise details of damages caused to road conveying the quantum of damages and the amount required for immediate temporary restoration and also for permanent restoration is enclosed.

The total amount required for restoring the damages as per these details are as under:-

1.	For immediate temporary restoration.	
	(a) for roads:	267.80 Cr
	(b) for bridges and culverts	12.00 Cr.
	Total Rs.	279.80 Cr.
2.	For Permanent restoration	
	(a) for roads:	327.22 Cr
	(b) for bridges and culverts:	14.75 Cr.
	Total Rs.	341.97 Cr.

Grant Total: Rs. 621.77 crore

The Department has assessed the cost of restoration of roads and bridges to **Rs. 621.77 Crore**. The Zone and Circle wise detail of road damages and the amount required for immediate temporary restoration and for permanent restoration is given in **Annexure-III, Appendix VI and VII**.

5. Damage to Irrigation and water supply schemes

Himachal Pradesh is currently facing a severe crisis due to the extensive damage caused by incessant rains. The state's water-related infrastructure, including water supply systems, irrigation facilities, sewerage schemes, and flood protection works, has been significantly impacted by rivers in full spate.

From July 1, 2024, to date, a total of **6,943 schemes** have been reported damaged, comprising:

- **5,505 Water Supply Schemes**
- **1,213 Irrigation Schemes**
- **99 Sewerage Schemes**
- **69 Flood Protection Works**
- **57 Hand Pumps**

The total estimated financial loss is ₹540.88 crore. However, under the revised norms for assistance from the **National Disaster Response Fund (NDRF)** for natural calamities, the estimated eligible assistance for the Jal Shakti Vibhag comes to **₹134.42 crore**, as detailed below:

Items	Nature of Assistance	No. of Damaged Schemes/Hand Pumps	Total Cost of Assistance
Drinking Water Supply Schemes	₹2.00 lakh per damaged water supply scheme	5,505	₹110.10 crore
Repair of Hand Pumps	₹10,000 per damaged hand pump/Public Stand Post	57	₹5.70 lakh
Minor Irrigation Schemes	₹2.00 lakh per damaged minor irrigation scheme	1,213	₹24.26 crore
Total			₹134.41 crore

While the estimated total loss stands at ₹540.88 crore, the financial assistance from the NDRF based on Government of India norms is significantly lower at ₹134.41 crore, creating a shortfall in resources needed for recovery. The scheme wise detail of damages is given in **Annexure-IV**.

6. Damage to Agriculture Crops

Himachal Pradesh is a relatively small state in area and population and is geographically different from most Indian states in the plains. The State lies between 30°22'40" and 33°12'20" north latitude and 75°45'55" and 79°04'20" east longitude. Himachal Pradesh has relatively abundant water resources from major five river systems, mostly originating from glaciers. The five major river basins cover around 90% of the geographical area. The surface water resources of these river systems are perennial, originating from glaciers, and

the flow is further augmented by run-off from the downstream catchments. Most glaciers are small in size with length of 2-25 km and accumulation zone of 2-4 sq km. Due to the adverse effect of global warming phenomenon, constant recession phenomenon is recently hastening in these glaciers.

Climate and Agro-ecological Zones

Climatically, Himachal Pradesh is different from most plain states in India. In the State, three seasons such as Winter season (October to February), Summer season (March to June) and Monsoon season (July to September) are there. However, due to wide range in altitude, the climate of the State varies from sub-humid tropical (Elevation 350-1000 m) in the southern low tracts, warm and temperate (Elevation 1001-1,500 m), cool and temperate (Elevation 1,501-2,500 m), and cold alpine and glacial (Elevation 2,501- 6,975 m) in the northern and eastern mountain ranges.

Damage caused to Agricultural crops of Kharif, 2024 season due to heavy rainfall:

In the State of H.P., about 20% of area is sown in the month of April-May whereas 80% of area is sown in the month of June which is a peak Kharif sowing period. During July-August & Sept, 2024, the State of Himachal Pradesh received heavy rainfall in some pockets of the state due to which the Agricultural crops mainly Maize, Paddy & Vegetables were affected and substantial portion of cultivated land was washed away. As per the assessment, the total cropped area of 3503.83 Hectares was damaged and 228.92 Hectare land was washed away. The total damage including Crops, agriculture land, in terms of money value has been assessed around Rs. 1119.96 lakhs. District-wise information is as under

Sr. No.	District	Total Cropped Area affected in Ha.	Total Agriculture land washed away in Ha.	Total Losses (Crop+Land) Rs. In Lakhs
1.	Bilaspur	0.00	0.00	0.00
2.	Chamba	16.00	0.50	3.20
3.	Hamirpur	890.00	0.00	27.53
4.	Kangra	347.26	1.28	17.64
5.	Kinnaur	0.00	0.00	0.00
6.	Kullu	725.60	65.00	447.28
7.	L/Spiti	8.73	0.00	56.34
8.	Mandi	266.94	138.84	102.44
9.	Shimla	500.30	7.05	349.06
10.	Sirmour	588.00	16.25	72.39
11.	Solan	5.00	0.00	6.00
12.	Una	156.00	0.00	38.08
	Total	3503.83	228.92	1119.96

(The details of agriculture sector loss is given in Appendix-IIA and IIB and III)

7. Damage to Horticulture Crops

Horticulture is an important sector of economic development in the state contributing about Rs 5000 crore towards the states economy. This sector is major source of earning and employment in the state. Fruit crops covers about 2.29 lakh 89ectare of area of the state. Apple, mango, citrus and other stone fruits are major fruit crops grown in the state and constitute about 83 % of total fruit production. Apple is the dominating fruit crop of the State occupying about 48% of the total area under fruits & about 76.50 % of the total fruit production. About 5 lakh families are directly or indirectly involved in the Horticulture primarily fruit production & other allied activities like bee keeping, mushroom production, floriculture and fruit processing etc.

The current heavy rainfall has caused huge damages to the fruit orchards due to land slides and other scientific reasons. The abnormally high rainfall may cause various diseases in the fruit plants reducing the production to abysmally low levels. Size and colour of developing fruits is also affected greatly if rains are torrential. Transportation and marketing of the fruit produce has also been affected due to damages to roads. During the current heavy monsoon the fruit crops have suffered heavy losses to the tune of **Rs. 139.95 crores** till now and there is likelihood of further loss due to low production on account of various factors associated with the heavy rains. The detail of horticulture sector loss is given in **Annexure – VI**

8. Damage to Electricity Infrastructure

Incessant heavy rainfall and cloud bursts coupled with flash floods across the state during the monsoon season 2024, has caused massive damaged to the electrical infrastructure i.e. Transformers, Poles, HT & LT lines, Sub-Stations, towers and power stations being maintained by HPSEBL. In this regard, some following points are highlighted:

1. In the Operation wing, many transformers (including structures), HT & LT poles, HT & LT lines were buried in the soil and washed away in the river, due to which the route of HT/LT lines and transformers structure has to be changed and required shifting to other places.
2. At most places power has been restored through temporarily arrangements and alternative lines/sources.
3. In the Generation Wing, due to heavy rainfall/cloudburst in the catchment area of Ghanvi Khad on the night of 31.07.2024, a heavy flood occurred in Ghanvi Khad, causing extensive damage to various civil assets/components of the 2x11.25 MW Ghanvi Stage-I and 2x5 MW Ghanvi Stage-II Power Houses.
4. Besides this, properties of the Electrical Systems Wing were also damaged. Towers from Ghanvi Stage-I to Ghanvi Stage-II got damaged due to heavy flood occurred in Ghanvi Khad.

As of now the tentative damage to the electrical infrastructure of HPSEBL across the whole state during the monsoon season of 2024 (01.04.2024 to 22.09.2024) is Rs.12404.11lakh. A brief description of the damage is given below:

Sr. No.	Damage to the Electrical Infrastructure	Unit	Qty.	Amount (IN Lakh)	% of Reusable Materials
1	DTR	No.	363	801.51	2 to 5
2	Poles	No.	5600	744.12	2 to 5
3	LT Line	km	1675.43	5343.01	10 to 12
4	HT Line (11 kV & 22 kV)	km	951.88	3624.81	15 to 18
5	HT (up to 33 kV)	km	25.75	137.53	15 to 18
6	Damage to Retaining/Protection wall etc. i/r Operation wing			272.87	0
7	Electrical System Wing			722.86	2 to 5
8	Generation Wing			757.40	2 to 5
Total Amount				12404.11	

The details of electric infrastructure sector is given in **Annexure – V**

9. Education

During the current disaster 77 buildings of government Schools were damaged. Many other have suffered minor damages. The total loss on this account has been assessed to **Rs 2.75 Crore**. The detail has been given in **Annexure-X**.

10. Urban Development

In this monsoon season there have been significant damages to the infrastructure of the Urban Development department. The total loss on this account has been assessed to **Rs 0.68 Crore**. The detail is given in **Annexure-VII**.

11. Rural Development

A lot of infrastructure like Panchayatghars, Mahila Mandal Bhawans, Community Centers etc. of the rural development department has sustained heavy damages during the current disaster. The total loss on this account has been assessed to **Rs 52.11 Crore**. The detail is given in **Annexure-VIII**.

12.Fisheries

Due to heavy rain and flood during the current monsoon season 2024 Rs. 0.90 Crore losses and damages has occurred in fisheries sector. The detail is given in **Annexure-XI**.

13.Health

The heavy rainfall during the monsoon period from 27 June to 25 September, 2024 has caused significant damage to the health infrastructure in the state. The estimated loss of **Rs. 1.98 Crore** indicates the severity of the impact on the state's healthcare facilities. The detail is given in **Annexure-IX**.

14.Removal of Debris in Community Areas

The removal of debris in the community area after a flash flood and landslide is a critical step in the recovery and rehabilitation process. Flash floods and landslides left behind a significant amount of debris, which caused a lot of obstruction in public places, roads, damage buildings, schools, agricultural land, houses and posed safety hazards to residents. Huge efforts in terms of machinery, manpower, etc. were mobilized to clear the debris. Details of expenditure/liability incurred are as under: -

Sr. No.	Name of Districts/ Department	Quantum of debris (in Cubic meter approximated)	Rated as per cum for removal/dispose off.	Expenditure incurred (In Crore)
1.	Shimla	114431.02	157.30	18.00
2.	Kullu	95359.18	157.30	14.50
3.	Public Work Department	222504.76	157.30	35.00
4.	Sirmaur	31786.40	157.30	0.50
Total				68.00

15.Relief Camps

Due to Cloudburst and Flash flood situation in State, significant efforts were made to evacuate and rescue people stranded in the affected areas. Evacuation of about 1000 people and 250 people were rehabilitated to relief camp established in Samej and Bagipul. The people in relief camps were provided essential items. Expenditure incurred on relief and rehabilitation was **Rs. 10.12 Crore**.

Total Damages and losses are assessed at Rs 1613.50

Chapter 8

Summary of Claims

Summary of the total requirement of funds under NDRF
